# Table of Contents

Esri resources for your organization

## Course introduction

Course introduction
Course goals
Installing the course data
Icons used in this workbook

## 1 The language of spatial analysis

Lesson introduction
Spatial analysis defined
The value of spatial analysis
The categories of spatial analysis
Classifying spatial analysis questions
The spatial analysis workflow
What is the Crime Analysis solution?
Applying the spatial analysis workflow to the opioid crisis
Lesson review
Answers to lesson 1 questions

## 2 Planning and preparing for analysis

Lesson introduction
Which data types can be used for analysis?
Common data challenges in public safety
Table relationships
Joins and relates
Exercise 2A: Prepare data for analysis
    Prepare your ArcGIS Pro project
    Join attribute data
    Add call data to your map
Enhancing public safety data
Exercise 2B: Modify attributes for analysis
    Enrich a layer
    Add a day of week field
    Modify a field's attributes
    Join polygon attributes to point data
Lesson review

Answers to lesson 2 questions

## 3 Understanding where

Lesson introduction
Mapping where things are
Measuring size, shape, and distribution
Explore tools for understanding where
Exercise 3A: Analyze where
    Prepare your data
    Create graduated points to determine problem locations
    Create heat map symbology
    Create permanent rasters from heat map symbology
    Calculate density change
Checkpoint
Exercise 3B: Analyze size, shape, and distribution
    Use tools to show size
    Use tools to show shape and distribution
Lesson review
Answers to lesson 3 questions

## 4 Determining relationships

Lesson introduction
Types of relationships
How places can be related
Analyzing relationships
Exercise 4A: Use tools to find relationships between places
    Perform a spatial join
    Enrich a layer to include population data
    Compile summary statistics
    Create buffers around polygon features
    Overlay data with buffers
    Use proximity to find nearest locations
Relating space and time
Exercise 4B: Use time to analyze relationships
    Enable time in a layer
    Use the time slider
Lesson review
Answers to lesson 4 questions

## 5 Finding the optimal location

Lesson introduction

What is optimization?
Optimization in public safety
Using tools to find the best location
Exercise 5: Use ArcGIS Online to analyze optimal coverage
Sign in to ArcGIS Online
Prepare for analysis in ArcGIS Online
Create service areas
Find nearest hospitals to middle schools
Lesson review
Answers to lesson 5 questions

## 6 Detecting and quantifying patterns

Lesson introduction
What is spatial statistics?
Interpreting spatial statistics
Evaluating spatial statistics results
Clusters and outliers
Spatial statistics in action
Exercise 6A: Use spatial statistics tools
Prepare the project
Run hot spot analysis
Compare and overlay hot spots
Find similar neighborhoods
Find clusters and outliers
Recognize patterns over time
Exercise 6B: Use space-time pattern mining tools
Prepare the project
Create a space-time cube
Run the Emerging Hot Spot Analysis tool
Visualize the space-time cube in 3D
Link the 2D and 3D views
Lesson review
Answers to lesson 6 questions

## 7 Predicting outcomes

Lesson introduction
Spatial patterns explain outcomes
Explaining relationships with regression analysis
Explanatory variables in public safety
Identifying a fit regression model with diagnostics
How regression analysis can predict outcomes

Exercise 7: Use regression tools to predict outcomes
Prepare your project and data for analysis
Use the Exploratory Regression tool to find a fit model
Run the Generalized Linear Regression tool to explain variables
Use the Geographically Weighted Regression tool to find localized explanatory variables
Map coefficients to see variation over space
Use GWR to predict outcome
Lesson review
Answers to lesson 7 questions

## 8 Automating spatial analysis workflows

Lesson introduction
Why use automation?
Ways to automate in ArcGIS Pro
Using tasks to guide workflows
Exercise 8A: Create a new task
Add a task to your existing task item
Add a step to create counts for the services areas
Add a step to compare current year to previous year counts
Test your task
Using models in ArcGIS Pro
Exercise 8B: Build a model for spatial analysis
Prepare the project
Create a model
Add a tool to add XY data
Add tools to convert the date field
Add a tool to append updates to the main table
Add a tool to map crime hot spots
Run the model and view the results
Lesson review
Answers to lesson 8 questions

## Appendices

Appendix A: Esri data license agreement
Appendix B: Acknowledgments
Appendix C: Answers to lesson review questions
Appendix D: Additional resources
